

ASSET MANAGEMENT SYSTEM

About Us

d.code is a leading provider of enterprise mobile solutions and device independent and OS agnostic applications for quick build and deploy. Established in 2009 and headquartered in Dubai, we have successfully enabled mobility solutions and digital transformation for our clients in over 15 countries.

Our team brings together a combined experience of over 50 years in the industry and have been one of the earliest movers in this space in the Middle East, helping us cement a leadership position in the market.

Together with our proprietary d.mobile platform, we partner with leading software and infrastructure vendors across the globe to bring the best of futuristic technology to our clients in the region.

Our goal is to enable our clients deploy best in class mobility solutions to accelerate growth, 'be digital' and drive operational efficiency.

ASSET MANAGEMENT SYSTEM

Asset management and tracking software is a solution used by organizations to manage their assets efficiently throughout their lifecycle. It involves monitoring and tracking all assets from the point of purchase to disposal.

Here's how the solution works based on the points mentioned:

Implemented on Cloud or on-premise with MOF guidelines

The software can be implemented either on the cloud or on-premise, depending on the organization's preference. The solution should be designed with MOF (Microsoft Operations Framework) guidelines to ensure that it aligns with the organization's IT service management strategy.

Web-based and mobile app for transaction

The asset management and tracking software is accessible via a web-based interface and mobile app, making it easy for users to manage assets from any location using their preferred devices.

The solution is implemented using Barcode RFID and IoT technology

The software uses barcode technology to track assets efficiently. This involves assigning unique barcode labels to each asset, which can be scanned using a barcode scanner to retrieve information about the asset.

Track assets from 'purchase to disposal

The asset management and tracking software tracks assets from the point of purchase to disposal. It records asset details such as purchase date, purchase price, warranty details, and disposal details.

Asset identification based on Site/Group/Category

Assets are identified based on site, group, and category. This enables users to quickly locate assets and perform transactions based on their location and category.

Asset allocation to location/group/category/custodian

The software allows users to allocate assets to specific locations, groups, categories, and custodians. This enables users to track the movement of assets and determine who is responsible for them.

Asset Maintenance

Planning a maintenance strategy can be a complex process, when coupled with our asset management system the process becomes a lot easier giving businesses the platform to deploy effective asset maintenance management to Slow asset depreciation, Prolong the life of aging assets, Reduce emergency repairs and breakdowns, Increase asset performance and reliability and Improve workplace health and safety.

Asset ID (Barcode/RFID tagging)

Each asset is assigned a unique ID in the form of a barcode or RFID tag. This ID is used to identify and track the asset throughout its lifecycle.

Asset audit

The software allows for regular asset audits to be conducted to ensure that asset records are accurate and up to date. This involves physically verifying asset details and updating records as required.

Auto Discovery Tool

A powerful solutions to monitor, manage, and secure systems, data and networks. We offer secure infrastructure and tools to simplify complex ecosystems, as well as resources to navigate evolving IT needs.
