

incode

Identity solutions for scaling trust

What Incode can do for you.

Scale your business

Onboard more customers with a fully automated platform.

Almost all identity companies rely on traditional methods that have humans-in-the-loop. The problem with this is that human verification processes cannot scale at the booming rate of digital and online growth: this causes delays in verifying an identity, increases the probability that humans can make an error, introduces human bias and exposes customers information to human beings all over the world through manual review.

Incode's fully automated technology means speed, privacy and accuracy.

Scale security

Catch fraud in seconds with the world-class AI proprietary technology.

Being vertically integrated enables Incode to provide a better relationship between conversion and fraud. The company's own technology stack helps create a direct relationship with customers and cuts out all intermediaries.

More importantly, it allows the company to continuously improve the technology based on customer feedback making it the most secure biometric platform in the market.

The technology is proven to be best-in-class, recognized as one of the best in the world by the United States Department of Commerce's National Institute of Standards and Technology (NIST).

Scale simplicity

Faster go to market with single integration point with all your identity needs.

Incode's digital identity, verification and authentication solution incorporates dozens of flexible components in a configurable orchestration platform.

Forget about integrating multiple vendors to solve your identity needs, Incode's platform allows enterprises to combine any components such as capture, identity verification, authentication, KYC compliance and risk control to create their own unique onboarding journey in a single place.

Scale partnership

True partnership to help you achieve your business goals.

“Incode is the best identity onboarding solution I’ve seen so far” -

Juan Guerra Chief Innovation Officer, Citi.

Company Overview

Incode is a leading identity company that is reinventing the way humans verify their identity and interact with the world’s largest Banks, Fintechs, Marketplaces, Governments and Hotels with a highly secure, frictionless AI based experience.

Incode is an end-to-end fully automated orchestration platform that enables seamless access across multiple channels with products focused on onboarding, authentication, payment verification which increase conversion and reduce fraud.

Recognized as a leader in enterprise-grade facial recognition technology by the US Government’s National Institute of Standards and Technology (NIST), Incode is building the customer experience of the future with a set of proprietary, machine learning, computer vision, anti-fraud and digital onboarding components. With its vision of one identity everywhere, and deep focus in enterprise, the company is growing exponentially.

Incode is based in San Francisco with offices in Europe and Latin America.
