

Facility: Stingray Cove and Turtle Beach
Location: Nassau, The Bahamas
Install Date: July 2022
Designer: Life Floor Studio
Area: Combined 10,637 (988 sq m)
Texture: Ripple 2.0
Thickness: 3/8"

TROPICAL GETAWAY

The wavy blue designs at Stingray Cove and Turtle Beach play areas complement the tropical aesthetic of Baha Mar Resort. Custom landing pads at Turtle Beach blend into the main design and contribute to an immersive guest experience.

BAHA BAY AT BAHA MAR

INNOVATIVE DESIGN

Life Floor is engineered for aquatic play. The creative possibilities are endless with a wide range of tile choices, custom design opportunities, and a dedicated Studio ready to visualize new customer projects. Whether revitalizing older projects or starting from the ground up, our Studio creates designs for any application.

Our palette of colors features gradients and a range of both bright and subdued tones to accommodate the unique design needs of each aquatic facility.

The Life Floor Studio encourages customers to select three or more tile colors for every application. Surfaces that feature this variety are visually more interesting and operationally easier to maintain.

For creative inspiration and design tips, visit lifefloor.com/design.

TEXTURES

SLATE

Life Floor tiles are available in two textures: Ripple and Slate.

RIPPLE

Ripple is a popular choice because it is our most slip-resistant texture when wet. The grooves of these tiles provide increased traction and a decreased risk of hydroplaning. As a result, Ripple tiles are certified for use in aquatic play areas by the NSF/ANSI/CAN 50 aquatic safety surfacing standard.

SLATE

Slate is designed to resemble the varied texture of stone for projects aiming to achieve more natural or architectural looks. This texture features MicroTread™ on the surface as a subtle method to enhance slip-resistance.

SQUARES

Our tiles are manufactured as 24" squares which makes this shape the most popular and cost effective. Squares are often arranged in randomized color fields or bold geometric patterns.

RECTANGLES

Rectangles are commonly arranged along a 12"x 24" grid or as long planks created by aligning tiles of the same color in a row.

TRIANGLES

Triangles are the most effective choice for creating gradient effects and adding bold accents around facilities.

HEXAGONS

Hexagons add modern design elements and colorful geometric patterning wherever they're installed.

PLANKS

New for 2023, our 6"x48" planks provide an opportunity to design "wooden" boardwalks or bold geometric designs.

INLAYS

Life Floor Inlays are graphic shapes that fit within our standard square tiles. These features are often requested in designs to add visual interest, enhance theming, and increase play value.

Our Marine Inlay set is shown on the left. This grouping of Inlays is perfect for sea inspired facilities, which makes it a popular choice for aquatic applications.

Inlay options can be themed to any motif. They can also be customized to feature specific branding, imagery, or logos.

In 2022, we added 120 new Inlays across twelve uniquely themed sets to increase design versatility. To view all of our available shapes, visit our Inlay Library at lifefloor.com/inlay-library.

As an easy way to add these themed elements to any design, contact us to learn about our Inlay packages.

CUSTOM DESIGN

Immersive designs and bold flooring graphics make facilities stand out. Our tiles can be custom cut to feature just about anything imaginable including curvy waves, themed elements, imagery, and patterning.

If you have a project in mind, contact us to begin exploring design possibilities with our Studio.

Embedding logos within Life Floor surfaces has been a popular design preference for facilities looking to reinforce or showcase branding. We use a proprietary precision cutting process that allows for the exact replication of any logo at any scale. Logo parts come factory cut, labeled, and ready to be installed on site for the most accurate brand representation possible.

We offer logo packages that vary in price based on the number and size of logos included in a design. To receive more information on package pricing, contact our team today at lifefloor.com/contact-us.

LOGOS AND BRANDING

ZERO DEPTH ENTRIES

Life Floor is a popular choice at zero depth entries as a way to add slip-resistance and cushioning along sloped areas that often otherwise present slippery conditions. With the added benefit of design, many customers opt to add visual interest, especially when spray features are present in these areas.

LANDING PADS

Life Floor landing pads are designed to meet the safety and quality standards of even the most challenging aquatic conditions. Our 7/8" thick landing pad tiles will never absorb water and will remain slip-resistant even when completely submerged underwater.

These modular 24" x 24" square tiles allow for custom sizing, design, and ease of installation. Using the same commercial grade contact cement as our standard tiles, Life Floor will never recommend the use of bolts to adhere our landing pads to the substrate.

SPECIALTY ITEMS

EDGE PADS

Life Floor is designed to protect visitors from the most accident-prone areas in aquatic facilities.

For this reason, many pools that feature activities like lily pad walks choose to wrap our tiles at edge landings. These pads provide traction for more steady footing and cushioning in the event that guests fall.

WRAPS

Our tiles easily wrap around pool coping to provide extra protection or a continuation of pool deck surfacing to the water's edge. For these applications, we typically layer our more pliable 3/16" thickness tiles.

TRANSITION STRIPS

Transition strips create safer progressions between different surface heights. We recommend transition strips at the edges of retrofit applications in order to reduce tripping hazards. Our transition strips are 24" long and 3" wide, can be cut to custom lengths, and are ADA compliant. For new construction, recess the slab 1/4" for our 3/8" thick tiles in order to eliminate the need for transition strips. In cases where this isn't possible, this product is the finishing detail we recommend.

DRAIN COVERS

Through our partnership with Daldorado, customers are able to continue Life Floor surfacing across the DalLUX support grate drainage system. For other applications, we can create custom drain covers to match up with drains located at slab below our tiles. This results in a finished look that blends in with the rest of our safety surfacing while also providing the draining functionality required.

FINISHING DETAILS

SAFETY MESSAGING

Safety messaging tiles can be integrated into any installation. They are fully customizable, and can be as simple as “No Running” signs or as complex as branded graphics or slide tower instructions. Like our depth markers, all safety messaging tiles are made of precision cut Life Floor.

DEPTH MARKERS

Depth markers are made with the same high-performing material as the rest of our tiles. Letters, numbers, and graphics are never painted on. Instead, they are cut from Life Floor and inlaid into our tiles, ensuring that messaging will last the full lifetime of our product.

A vibrant water play area featuring a large waterfall cascading over a green metal frame. The background is decorated with colorful murals of tropical plants, including palm trees, ferns, and flowers. A young child in a dark shirt and colorful shorts stands on a checkered tile floor, reaching up towards the water. The scene is set outdoors with trees visible in the background.

DIVE INTO PROJECT PLANNING

No two facilities or designs are exactly alike, which makes the process of specifying Life Floor unique. Our team works with our customers and partners from design and budgeting through installation and maintenance to ensure that projects run smoothly and our product delivers maximum benefit.

THE DESIGN PROCESS

Some clients and partners decide to conceptualize their surfacing projects in-house while others choose to take advantage of our Studio's complimentary design services.

We work to establish a design direction either based on one of our standard Themes or Patterns or entirely from scratch.

After receiving scaled plans, photos, and general design guidelines, our Studio creates a few initial concepts for review.

Once a final design has been selected and approved, we generate a project proposal for materials and installation.

DID YOU KNOW?

Zoning is an important part of play value. This splash pad at Deerspring Park, Illinois has three zones of play tailored for different abilities and developmental stages. The light blue is calmer geared for the younger development stages, the dark blue is for middle development stages, and the turquoise and aqua colors are for older development stages.

Zoning encourages all types of play even in small spaces. Color coding visually signals to guests where play areas change so they can play freely.

TYPICAL PROJECT TIMELINES

It takes approximately 12 weeks from the start of the design process to the shipment of tiles from our U.S. manufacturing facility.

While times vary by project, the following phases can be referenced for planning estimates:

Design Phase

2 weeks after scaled site plans are received by our Studio

Material + Labor Quote

1-2 weeks following design approval

Manufacturing Production

6-8 weeks following quote approval

Shipping

Varies by destination and method

CERTIFIED INSTALLATION

As part of our promise to deliver a premium product and customer experience, we've built a worldwide network of certified installation partners to serve our customers around the globe.

Our installation partners are trained from site assessment to final installation inspection to provide our customers with accuracy and excellence at every step of the process.

Inside Edge Safety Surfaces is our Preferred Installation Partner in North America. To learn more about them, visit safetysurfaces.com.

For projects outside of North America, explore our global network of Certified Installers at lifefloor.com/installation.

SAMPLE OUR SURFACING

If you've never experienced our tiles in person, we recommend ordering a sample to feel the product firsthand.

Having physical swatches of our tile colors on hand are also useful when selecting palettes for projects.
